

ACADEMIC BIOGRAPHY

Armaan is an undergraduate at the Johns Hopkins University studying Biomedical Engineering and Biophysics. He is an aspiring MD/PhD student interested in using computation to characterize molecular phenomena and to perform database analysis to find relevant oncological trends. With Dr. Yaojun Zhang at Johns Hopkins, he investigates what properties of a *de novo* protein lead it to undergo a non-classical crystallization pathway *in cellulo*. In collaboration with Elmhurst Hospital, he investigates both national trends in oncological outcome and in-house management practices.
